

CANISTER HIGH SILICON CAST IRON ANODES

PRODUCT DATA SHEET

CANISTER HIGH SILICON CAST IRON ANODES

This canister anode consists of a tubular or stick type high silicon cast iron anode firmly pre-packaged in a large spirally wound galvanized mild steel canister that is filled with calcined petroleum coke backfill.

The canister housing is only intended to survive transportation and installation. Once installed, the exterior housing is part of the anode system and it is expected to be consumed quickly, leaving behind the anode and coke backfill.

PRACTICAL APPLICATION

Canister high silicon cast iron anode is normally used in area with high water table or where it is difficult to install loose coke backfill which is normally provided around anodes. Our canistered high silicon cast iron anode are perfect material for low resistivity soils, shallow vertical and horizontal surface ground beds, as well as wet, marshy soil conditions where caving is likely to occur.
